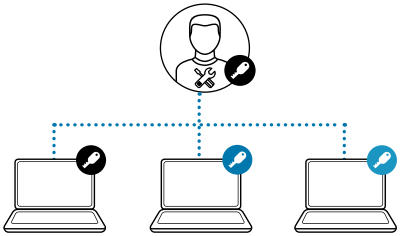
Custom Keyed Solutions

Kensington recognises that different businesses and organisations operate in different ways. We offer Custom Keying Solutions that allow users to select the ideal level of IT administrator control over their equipment, whilst helping employees safeguard against theft and avoid downtime due to misplaced keys.

Master Keyed



Admin Access with User Keys

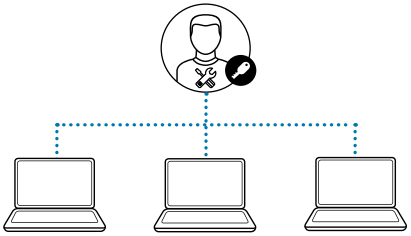
The Kensington Master Keyed locking system gives IT administrators universal access to unlock any piece of equipment with a master key while allowing employees to carry their own individual locks and keys. This gives employees the power to protect their laptops with personal locks that can be used anywhere in the office or on the go.

Advantage: On-site IT control with individual user keys

Industries: Healthcare, education, corporate and government offices

Ideal for: Upgrades, relocation, replacement or misplaced/lost keys - IT managers can use the Master Key to lock down a device when left unlocked to improve user compliance

Single Keyed



Admin-Only Access

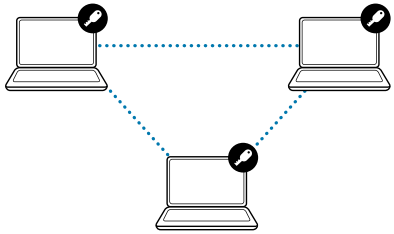
Implement high-level, convenient on-site security by physically securing company equipment using identical locks with keys that are restricted to IT staff. One master key opens them all, giving the IT manager ultimate control and access.

Advantage: Strictest IT control for administrator-only access

Industries: Healthcare, education, government

Ideal for: Locking down crucial infrastructure such as desktops, monitors, projectors, printers, servers and network equipment knowing access is as limited as possible

Like Keyed



Each Key Opens Every Lock

Provide wider flexibility and freedom to access equipment by offering a department, office or lab identical shared keys. This solution offers a solid layer of security against non-employee theft without restricting employee access and productivity, making efficient use of department budgets.

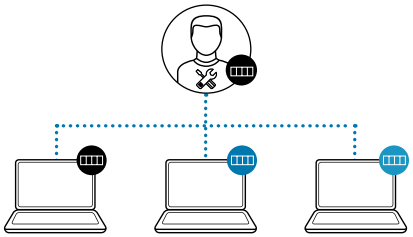
Advantage: Sharing control with every key opening each lock

Industries: Police departments, libraries, displays and point of sale units in retail outlets

Ideal for: Specialised environments where employees can check out shared laptops, tablets, projectors and other shared hardware

Kensington

Master Coded



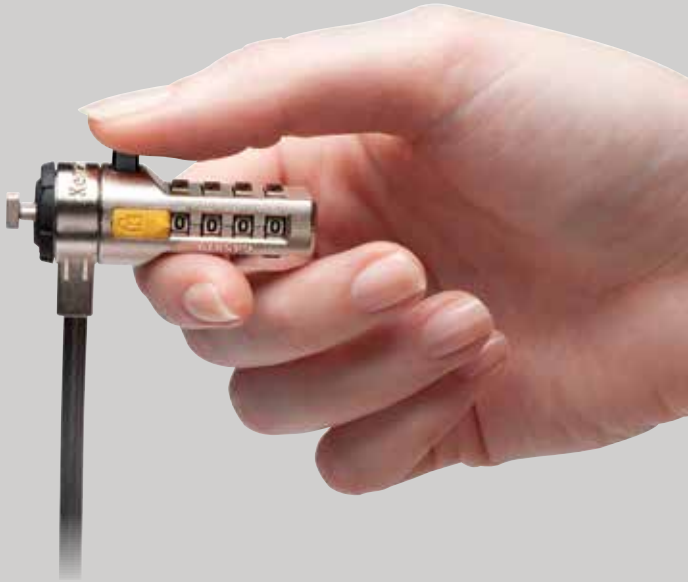
Admin Access with User Combination

Combination locks are ideal for field based staff or remote locations where keyed locks aren't practical. ClickSafe® Master Coded Locks allow users to set their own unique combination code. Administrators can overcome the users code using a ClickSafe® ComboGenie (see page 15).

Advantage: On-site IT control with individual user combinations

Industries: Healthcare, education, corporate and government offices

Ideal for: Upgrades, relocation, replacement or misplaced/lost keys - IT managers can use the ComboGenie to lock down a device when left unlocked to improve user compliance



Serialised Combination Locks

A more convenient solution for large lock deployments

Each Serialised Combination Lock is supplied with a serial number etched on to the lock head, together with a preset combination code shown on the sticker.

Kensington's cloud-based Register & Retrieve™ service allows the IT manager to allocate each lock to a user, together with its combination code. Each pack of 25 locks is supplied with a sheet to make user allocation easy.

Codes can be retrieved at any time, making it ideal for lost combinations or when an employee leaves the organisation.

DATA BREACH

Cybercrime is the fastest-growing type of crime impacting organisations - global cyber attacks are projected to cost companies $6 trillion annually by 2021. With more software and services moving to the cloud, cyber security measures aimed at preventing the loss or theft of data have never been more crucial.

Biometric security has a critical role to play in helping consumers and IT admins manage passwords, guard against wrongful access to sensitive devices and reduce fraud and identity theft.

Learn more about how advanced fingerprint-based biometric technology can offer unprecedented cyber security in a convenient, portable package.

GDPR Compliance - Why Physical Security Matters

GDPR requires organisations to apply sound security practices to electronic and paper-based data. Securing data against hacking and malware is top of mind for many organisations, however many fail to adequately address the physical security of IT hardware.

3. Kensington IT Security & Laptop Theft Survey, August 2016

41% of data breaches are caused by hacking, malware & physical device loss[1]

6.5 MILLION data records are lost or stolen every day[2]

1/3 of businesses have no physical security policy in place[3]

The **Advanced Encryption Standard (AES)** provides end-to-end encryption to ensure data cannot be deciphered, even if it is intercepted. Without this important security layer, a wireless device or network is vulnerable to ransomware, botnets and other cyberattacks.

Kensington is committed to providing businesses with powerful solutions that deliver Security, Connectivity and Wellbeing in the workplace. This is why we support the AES Encryption Standard in a wide array of devices.
