

# Are You Addressing Endpoint Security Gaps?

## How did we get here?

Roughly **200 billion connected devices**, yet nearly **15% of organizations do not use any form of endpoint security**

## What are these security gaps costing us?

Non-compliance with GDPR, CCPA, HIPPA, PCI-DSS and other regulations have cost companies more than **\$1.45 billion over the last eight years**

## Why is endpoint security so complicated?

Expanding list of devices connecting to the network

**52% of organizations report budget constraints** as the biggest challenge related to implementing and deploying a physical device security policy for portable devices

Increase in BYOD programs, desk sharing and mobile/remote workforces

By the end of the year, **90% of businesses will utilize some form of 2-factor authentication (2FA) that includes biometrics**

Employee non-compliance with data protection policies

**Less than 3% of employees use privacy screens** while on the road or out of the office and **only 9% of organizations require full compliance with company security policies**

## What are the best practices?

- **Deploy Physical Device Security for ALL Portable Devices**
- **Utilize Simple Solutions for End-Users**
- **Implement 2nd-Factor or Multi-Factor Authentication**

- **Train, Track, Certify and Enforce Compliance**
- **Seek Additional Cost-Effective Ways to Protect Data (like shredders!)**
