

Do You Need a Monitor Arm? LET'S FIND OUT!

Ask yourself or your teammates the following questions...

YES NO

- Is your work highly visual? I.e., coding, videography, photo-editing, data-based, or graphic design...
- Would you love it if you could rotate your external monitor from landscape to portrait mode or switch from side-to-side to vertically stacked configuration to cater to different tasks?
- Would it be easier to share work with colleagues if you could swivel your external monitor from left to right, for teammates to review?
- Do you use a dual monitor setup just about every day?
- Do you or your employees find yourself fighting with a stock external monitor stand or basic monitor stand/riser, constantly sliding your external monitor back and forth, side to side, unable to find a comfortable viewing posture?
- Is your current monitor arm or mount not adjustable enough to allow you to find a comfortable viewing posture?
- Have you struggled to find the comfortable sweet spot and promised productivity with your dual, curved, or large external monitor setup?
- Do you or any of your employees have neck tension?
- Do you or any of your employees log off each day with dry, tired eyes? Or find yourself squinting to view your screen?
- Do you find yourself craning your neck or lunging your upper torso forward to view your screen?
- Do you wear corrective lenses and have difficulty finding the right monitor position and angle for comfortable viewing because of a lack of adjustability?
- Do you work in a hotdesking, shared space where employees need to set up optimal monitor heights quickly? Do some employees or teammates report an inability to find a comfortable work posture?
- Do you work at a sit stand or standing desk and wish you could quickly and easily fine-tune the position and angle/tilt of your external monitor?
- Do you work at a desk with a shallow depth or in a shared workspace with benching style workstations? And are you unable to find a comfortable position with your current monitor mount because the wall behind or adjoining desk prevents full adjustability?

If you've found yourself answering "yes" to any of these questions for you or your employees, you should consider a monitor arm as a solution. Check out all the monitor arm solutions that Kensington has to offer by visiting our website at [Kensington.com](https://www.kensington.com)
